

The End of the Universe: Heat Death
Sparse Correlations, Uniform Modular Flow, No Structure

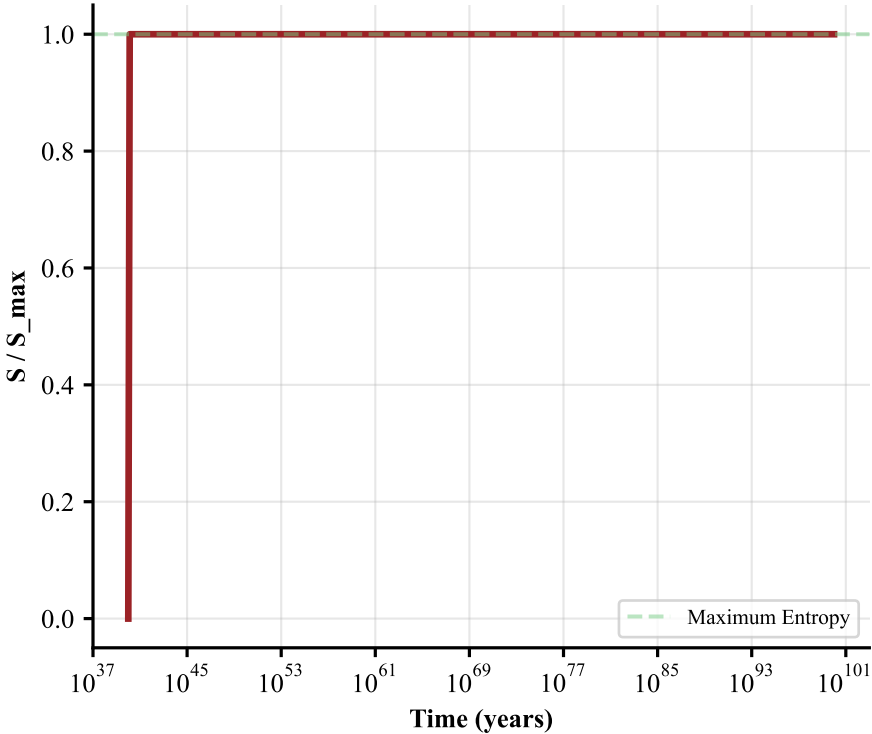

Sparse Correlations
(Heat Death)

Uniform Modular Flow
No Structure Remains

Entropy Saturation
($dS/dt \rightarrow 0$)

FINAL STATE: HEAT DEATH

$\Delta_\omega \approx I$
 $\sigma_t^\omega \approx \text{id}$
 $K_\omega \approx 0$

- No structure remains
- No correlations
- No energy gradients
- No change possible

Time exists but nothing happens

$\frac{dS}{dt} = 0$
